How to dispose of grass, leaves and other organic waste: use your brown bin and try *grasscycling*!

Estérel, May 7, 2019 - This summer, Estérel residents and their gardeners should use their brown bins to dispose of grass, leaves and other organic material. Until mid-October, brown bins are picked up every Tuesday by the regional municipality.

For some residents, one brown bin may not suffice. Citizens may buy an additional brown bin for \$ 115 including taxes or dispose of their organic waste in a container behind the city garage at the following rates:

- Residential \$ 12.00 per cubic metre
- Commercial \$ 20.00 per cubic metre

Grasscycling provides an environmentally friendly alternative to reduce your ecological footprint. Simply leave your grass or leaf clippings on your lawn. These clippings primarily contain water providing your grass with natural fertilizer and needed humidity while helping to resist disease. *Grasscycling* also reduces the ecological cost of transporting and dumping organic waste.
